

## *Intelligent Paper*

# Premium quality tickets

**Excellent reverse-side printability**

- KL 515PR
- KL 520PR

## KANZAN ticket material

*intelligent solutions for all applications*

**KL 515PR and KL 520PR are specially developed grades for all ticket requirements.**

These grades have a reverse side with illustration print quality and are thus ideal for applications where a very high quality printing is required, or even crucial. Equally convincing, the thermal side of the PR series, which guarantees an outstanding thermal printout image.

Furthermore, dynamic sensitivity allows top printing speeds of up to 300 mm/s (12 ips). The special quality of the thermal coat allows a high graphic resolution and ensures that, even on printers with lower print energy up to 300 dpi, every detail and every barcode are displayed in a sharp and clear image without flaws.

These KANZAN Topcoated products with Premium Reverse side are available in two paper thicknesses:

- **KL 515PR in 150 µm**
- **KL 520PR in 190 µm**

### Convincing product qualities

- Excellent reverse-side printability in illustration print quality; even for high quality artwork
- Above-average whiteness of the reverse side for an upmarket look
- Outstanding thermal printing quality thanks to high sensitivity and a high graphic resolution
- Suitable for 200 dpi and 300 dpi thermal printers
- Outstanding display of all kinds of barcodes thanks to excellent print contrast signals (PCS)
- Very good resistance against water, alcohol, oil, or fat and plasticizers
- Suitable for printing speeds of up to 300 mm/s (12 ips)
- UV-offset- and UV-flexo-printable

**KL 515PR und KL 520PR – the perfect choice for printing high quality admission tickets for cinemas, theatres, sports and other cultural events.**
